Industrial managed PoE++ LAN-RING switches equipped with Ethernet ports, SFP+ slots, RS485 bus, digital/alarm inputs and relay outputs. With event management included for advanced management, these switches are ideal for applications with high demands on security and flexibility of the equipment used. The switches support redundant MESH/RING topologies with connection recovery up to 30 ms. Thanks to the highly resilient hardware, the switches can be deployed in a wide operating temperature range from -40 to 75 °C with a maximum PoE power of 150 W. All inputs and outputs are equipped with surge protectors, making the switches suitable for deployment in even the most demanding environments.

The devices are developed and manufactured in the EU and are NDAA compliant.
